

UNIDAD 6 XSLT**ACTIVIDAD 7. CONVERTIR XML A TXT**

Dado el fichero 07.xml :

```
<?xml version="1.0" encoding="UTF-8"?>
<network>
  <ethernets>
    <name>enp0s3</name>
    <addresses>192.168.2.110/24</addresses>
    <gateway4>192.168.2.1</gateway4>
    <nameservers>
      <addresses>8.8.8.8</addresses>
      <addresses>8.8.4.4</addresses>
    </nameservers>
  </ethernets>
  <ethernets>
    <name>enp0s8</name>
    <addresses>192.168.2.111/24</addresses>
    <gateway4>192.168.2.1</gateway4>
    <nameservers>
      <addresses>8.8.8.8</addresses>
      <addresses>8.8.4.4</addresses>
    </nameservers>
  </ethernets>
</network>
```

Se pide obtener un nuevo archivo TXT con el siguiente formato

```
network:
  ethernets:
    enp0s3:
      addresses:
        192.168.10.10/24
  ethernets:
    enp0s8:
      addresses:
        192.168.20.10/24
  ethernets:
    enp0s9:
      addresses:
        192.168.30.10/24
      routes:
        to: default
        via: 192.168.30.1
      nameservers:
        addresses:
          8.8.8.8
          8.8.4.4
```
